Profile Summary

B.Tech Artificial Intelligence and Data Science graduate with strong CS fundamentals, DSA, and hands-on experience building agentic AI, RAG, NLP, and computer-vision systems. Built ClosePilot, a stateful 7-node LangGraph workflow with typed state, checkpoint-based Human-in-the-Loop (HITL) interrupts, branching, safe pause/resume, Claude integration through MCP, structured-output validation, and a 14/14 passing Pytest suite. Also built RepoChat, a LangChain and FAISS retrieval system with automated response evaluation and LangSmith tracing. Comfortable with Python, async programming, typing, REST APIs, Git, and structured problem-solving, with a strong interest in context engineering and reliable LLM applications.

Professional Experience

Proitbridge Machine Learning Intern

Sep 2025 – Dec 2025

- Engineered a Python-based CatBoost classification pipeline using pandas and NumPy to process 100+ features from a consumer dataset, predicting loan-default risk with 90% accuracy and 0.74 ROC-AUC.
- Optimized feature-selection and hyperparameter-tuning scripts, containerizing preprocessing and inference modules for integration testing on AWS EC2.
- Implemented SHAP-based interpretability modules in Python to explain feature contributions and communicate applicant-level predictions to business stakeholders.

Projects

ClosePilot — Multi-Agent AI Sales Copilot

[github](#)

- Built a 7-node stateful LangGraph workflow covering research, prioritization, strategy, communication, approval, action, and verification, with typed state, checkpoints, HITL interrupts, branching, and safe pause/resume.
- Integrated Claude through MCP for tool calling against a HubSpot CRM and implemented structured-output validation with read-after-write verification.
- Added LangSmith tracing for observability and verified reliability with a Pytest suite with 14/14 tests passing.

Redrob — Intelligent Candidate Ranking Engine

[github](#)

- Built an offline, CPU-only hybrid ranking pipeline that ranked the top 100 candidates from a 100,000-candidate pool against job descriptions in under 8 seconds of inference time.
- Engineered a two-phase architecture with BAAI/BGE embeddings, vectorized retrieval, semantic similarity, skills, experience, and behavioral signals, producing deterministic rankings.
- Deployed an interactive Streamlit sandbox on Hugging Face Spaces with score breakdowns and CSV export for candidate filtering.

Semantic AI Ticket Routing System

[github](#)

- Architected a Python backend processing 108,819 cleaned support tickets for classification, team assignment, priority mapping, and resolution-time ETA prediction.
- Developed Sentence-BERT embedding pipelines with FAISS for semantic search, serving predictions through FastAPI with SQLite audit logging.
- Tracked model runs with Weights & Biases; achieved 81% priority accuracy, 80% action accuracy, and 7.73-hour mean absolute error for ETAs. Co-authored an IEEE ICIRCA 2026 paper.

HazWaste Detection — Hazardous Waste Identification

- Refined and optimized a YOLOv8 computer-vision model using Python scripts for dataset augmentation, error analysis, and evaluation, achieving 56.6% mAP@0.5 and 61.8% recall.
- Wrapped the model in a FastAPI REST service, reducing response latency from 3–5 seconds to 110ms, and containerized it with Docker to reduce deployment footprint by 55%.

RepoChat — GitHub Repository RAG Intelligence System

[github](#)

- Built a modular Python RAG assistant using LangChain and FAISS to ingest, chunk, and index 1,000+ GitHub repository files for context retrieval and grounded code generation.

Technical Skills

Context Engineering – Layered context, context selectors and filters, token budgeting, summarisation/compaction, typed context schemas

CS Fundamentals & Programming – Python (async, typing, OOP), Data Structures & Algorithms, clean/idiomatic code, Git/GitHub

Agent Orchestration – LangGraph, state machines, checkpoints, HITL interrupts, branching/retries, multi-agent design, CrewAI (explored)

LLM Integration & Retrieval – Anthropic Claude, OpenAI, MCP, prompt engineering, tool calling, structured output, FAISS, embeddings

Quality, Evaluation & Governance – Pytest, LangSmith tracing, verification/validation patterns, grounded-output checks, auditability

Deployment & ML – FastAPI, Docker, AWS EC2, PyTorch, CatBoost, SHAP, Sentence-BERT, SQL

Education

B.Tech – Artificial Intelligence & Data Science

2022–2026

JCT College of Engineering and Technology, affiliated with Anna University

HSC – Mathur Boys Higher Secondary School

2022

Tamil Nadu State Board

Certifications

- Foundation: Introduction to LangChain – Python — LangChain Academy (Jul 2026)
- Python for Data Science, AI & Development — IBM via Coursera
- Databases and SQL for Data Science with Python — IBM via Coursera
- Introduction to Model Context Protocol — Anthropic
- SQL (Basic) Certification — HackerRank
